1. Introduction

Status

MESSAGE TYPE : PRICAT
REFERENCE DIRECTORY : D.01B
EANCOM® SUBSET VERSION : 009

Definition

A message to enable the transmission of information regarding pricing and catalogue details for goods and services offered by a seller to a buyer. The message can also be sent from a buyer to a seller to specify special requirements such as buyer labelling or packaging requirements, or to provide a response (acceptance or rejection) to a previously received Price/Sales Catalogue.

Principles

The article information transmitted with the Price/Sales Catalogue message is intended to be used for reference by the trading partners in subsequent EDI interchanges of commercial messages.

The Price/Sales Catalogue message indicates descriptive, logistic and pricing information by individual product. Depending on the agreement between trading partners, the message might indicate only general information about the products, valid for all customers. However, the same message can be used to provide a customer with information specific to him, i.e. prices and special conditions.

Product information can be provided as a complete listing of all supplier's products or as an advance warning of particular changes.

The Price/Sales Catalogue message can also be used by suppliers to feed a central catalogue of products, making the information available to all interested parties. In addition, interested parties may be provided with information from a central catalogue or database of products by means of the Price/Sales Catalogue message.

Optionally, products can be grouped by supplier or manufacturer. In this case the supplier is identified in the NAD-CTA loop following PGI. If no grouping of products is required, the detail section starts with one occurrence of PGI.

Each individual item, Consumer Unit, Traded Unit or Despatch Unit is described in the LIN segment group. Components of a Despatch Unit or Traded Unit can be referenced to using the sub-lines function of the LIN segment, and, additional repeats of the LIN segment group to describe the unit (see * Structure below).

The Price/Sales Catalogue message can be used to indicate specific action. This is implemented by use of the message function code in the BGM segment and the action request code in the LIN segment. These action codes can be used to change, add, delete and confirm product information in the detail section of the message.

The message function code in the BGM segment is used to indicate that all the items in the Price/Sales Catalogue have the same action required. In this case the action request code in the LIN segment should correspond to the functionality of the message function code in the BGM segment. Otherwise, the functionality indicated in the LIN segment will override the functionality indicated in the BGM segment.

When using the Price/Sales Catalogue message to provide a response the message sender may indicate three types of information;

- The total acceptance of a previous Price/Sales Catalogue message. In this instance only mandatory segments and segments identifying the parties and the message being responded need to be transmitted. The acceptance of the message is indicated using data element 1225 (code value '29, Accepted without change') in the BGM segment.
- The total rejection of a previous Price/Sales Catalogue message. In this instance only mandatory segments and segments identifying the parties and the message being responded need to be transmitted. The rejection of the message is indicated using data element 1225 (code value '27, Not accepted') in the BGM segment.
- The proposed change of information at either a product group level or at an individual product level. Where changes take place it is recommended that all of the information related to the level being changed be

1. Introduction

retransmitted for confirmation purposes e.g. at PGI level all segments, at LIN level all segments. At product level data element 1229 in the LIN segment must be set to '3, Change'. Reference to a specific line being responded to is achieved through the use of a combination of the reference to the original document (either at heading or PGI level) and in the RFF at detail level using DE 1156 'Line number'. The FTX segment at the PGI and LIN levels may be used to provide explanation, either in coded or free form, as to why the information is being changed. Information at PGI or LIN level not re-transmitted is automatically accepted by default. Accepted information at product level may also be explicitly indicated using the code value '4, No change', in data element 1229 in the LIN segment.

Structure

The structure of the Price/Sales Catalogue message has been designed to allow for the description of standard groupings (mixed assortments) of different articles and/or to provide the description of the logistic/packaging hierarchy for a product or group of products.

Both these functionalities are achieved by means of the usage of extra repeats of the Line Item (LIN) segment and, any other segments in the LIN segment group required for detail purposes, e.g., QTY segment, in the detail section of the message.

Standard mixed assortments are identified using the sub-lining function in the LIN, and the other segments within the LIN segment group providing the identities and quantities of the component products of the mixed assortment.

Should the component products of a mixed assortment change, the Addition, Deletion, Change and No Change action request codes in the LIN segment can be used to update a partner's file or central catalogue.

When describing a logistic group the first occurrence of the LIN segment will always refer to the consumer unit or smallest non-divisible unit, the second occurrence of LIN to the next upper level unit (e.g. a traded or despatch unit), and so on.

Describing a logistic hierarchy is best illustrated with an example:

Consumer Unit (GTIN smallest non-divisible item)

Traded Unit (12 Consumer Units)

Despatch Unit (50 Traded Units)

Consumer Unit In line 1

LIN+1... = Identity of the Consumer Unit - No Sub-lines set.

PIA

' = Description of the consumer unit in terms of additional identities, measurements, allowances or charges, additional prices, etc.

PAC

PAT

Traded Unit In line 2

LIN+2... = Identity of Traded Unit.

PIA

' = Description of the traded unit in terms of additional identities, measurements, allowances or charges, additional prices, etc.

1. Introduction

PAC

PAT

LIN+3... = Identity of Consumer Unit inside the Traded Unit, Sub-line used to establish a link between the Traded and Consumer Units.

PIA

QTY = Number of Consumer Units within the Traded Unit.

Despatch Unit In main line 3

LIN+ 4... = Identity of Despatch Unit.

PIA

. = Description of Despatch Unit in terms of additional identities,
. measurements, allowances or charges, additional prices, etc.
.

PAC

PAT

LIN+5... = Identity of Traded Unit inside the Despatch Unit, Sub-line used set to establish a link between the Despatch and Traded Units.

PIA

QTY = Number of Traded Units within the Despatch Unit.

Please Note

that there are more extensive examples and also explanations on the use of sub-lines in PART I, SECTION 4.11 and in the examples section of this message (immediately after the segment's description).

Price/Sales Catalogue Heading Section

UNH - M 1	- Message header This segment is used to head, identify and specify a message.
BGM - M 1	- Beginning of message This segment is used to indicate the type and function of a message and to transmit the identifying number.
DTM - M 35	- Date/time/period This segment is used to specify the date or period of the Price/Sales Catalogue.
FTX - C 99	- Free text This segment is used to provide any free text information related to the complete Price/Sales Catalogue message.
SG1 - C 99	- RFF-DTM A group of segments for giving references and where necessary, their dates, relating to the whole message, e.g. request for price information.
RFF - M 1	- Reference This segment is used to give references which apply to the complete message.
DTM - C 5	- Date/time/period This segment is used to specify dates relating to the references given in the preceding RFF segment.
SG2 - C 99	- NAD-SG3-SG4 A group of segments identifying the parties with associated information relevant to the price/sales catalogue.
NAD - M 1	- Name and address This segment is used to identify the trading partners involved in the Price/Sales Catalogue process. Identification of the buyer and supplier, or the central catalogue/data base, of goods or services is recommended in the Price/Sales Catalogue message.
SG3 - C 10	- RFF A group of segments giving references only relevant to the specified party.
RFF - M 1	- Reference This segment is used to indicate references related to the trading parties identified in the previous NAD segment.
SG4 - C 5	- CTA-COM A group of segments giving contact details of the person or department within the party identified in the NAD segment.
CTA - M 1	- Contact information This segment is used to identify the department and person within the party identified in the previous NAD segment.
COM - C 5	- Communication contact This segment is used to identify the communications number and the type of communications used for the contact identified in the previous CTA segment.
SG5 - C 5	- TAX A group of segments specifying tax related information, valid for the whole Price/sales catalogue, e.g. Value Added Tax at the standard rate is applicable for all items.
TAX - M 1	- Duty/tax/fee details This segment is to be used to provide tax information applicable to the whole Price/Sales Catalogue.

4. Segments Description

SG11 - C 10	- QTY-RNG A group of segments specifying the quantity of the allowance or charge with its measure unit specifier. A range to which the allowance or charge applies may be specified, e.g. An allowance of a free quantity of 20 pieces may be specified if the quantity of goods ordered is greater than 1000 pieces.
QTY - M 1	- Quantity This segment is used to specify quantity allowances/charges applicable for the entire Price/Sales Catalogue.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous QTY segment.
SG12 - C 10	- PCD-RNG A group of segments specifying the percentage for the allowance or charge, e.g. The allowance/charge amount is calculated as 5% of the goods value or a price reduction of 5% may be specified if the goods quantity ordered is within the range 5 tons to 10 tons.
PCD - M 1	- Percentage details This segment is used to specify percentage allowances/charges applicable for the entire Price/Sales Catalogue.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous PCD segment.
SG13 - C 10	- MOA-RNG A group of segments specifying a monetary amount for an allowance or charge. A range to which the allowance or charge applies can be specified, e.g. an allowance of 5000 EUR may be specified if goods value ordered is greater than 100000 EUR.
MOA - M 1	- Monetary amount This segment is used to specify monetary amount allowances/charges applicable for the entire Price/Sales Catalogue.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous MOA segment.
SG14 - C 10	- RTE-RNG A group of segments specifying the rate per unit and basis to which the allowance or charge applies, e.g. The allowance/charge rate is 3 EUR per 10 tons.
RTE - M 1	- Rate details This segment is used to specify rate allowances/charges applicable for the entire Price/Sales Catalogue.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous RTE segment.
SG15 - C 5	- TAX-MOA A group of segments of segments specifying tax related information for the allowance or charge.
TAX - M 1	- Duty/tax/fee details This segment is used to specify any taxes or duties which are due on the allowances or charges which have been specified for the entire Price/Sales Catalogue.
MOA - C 1	- Monetary amount This segment is used to specify tax amounts for the previous TAX segment.
SG16 - C 9	- TRU-DTM A group of segments to identify technical rules applicable for all products contained in the message and the rules' issue dates.

4. Segments Description

- TRU - M 1 - Technical rules
This segment is used to specify any technical rules which relate to all of the products contained in the message.
- DTM - C 9 - Date/time/period
This segment is used to specify the release date of the technical rules given in the previous TRU segment.

When relevant, additional information, tax details may be indicated. The basis for the calculation of the allowance/ charge may be a quantity, a percentage, an amount or a rate.
ALC - M 1	- Allowance or charge This segment is used to specify any allowances or charges related to the complete product group.
ALI - C 5	- Additional information This segment is used to indicate any special conditions related to the allowances and/or charges specified in the ALC segment.
SG22 - C 1	- QTY-RNG A group of segments specifying the quantity of the allowance or charge with its measure unit specifier. A range to which the allowance or charge applies may be specified. e.g. An allowance of a free quantity of 20 pieces may be specified if the quantity of goods ordered is greater than 1000 pieces.
QTY - M 1	- Quantity This segment is used to specify quantity allowances/charges applicable for the entire product group.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous QTY segment.
SG23 - C 1	- PCD-RNG A group of segments specifying the percentage for the allowance or charge, e.g. The allowance/charge amount is calculated as 5% of the goods value or a price reduction of 5% may be specified if the goods quantity ordered is within the range 5 tons to 10 tons.
PCD - M 1	- Percentage details This segment is used to specify percentage allowances/charges applicable for the entire product group.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous PCD segment.
SG24 - C 2	- MOA-RNG A group of segments specifying a monetary amount for an allowance or charge. A range to which the allowance or charge applies can be specified, e.g. an allowance of 5000 EUR may be specified if goods value ordered is greater than 100000 EUR.
MOA - M 1	- Monetary amount This segment is used to specify monetary amount allowances/charges for the entire product group.

4. Segments Description

RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous MOA segment.
SG25 - C 1	- RTE-RNG A group of segments specifying the rate per unit and basis to which the allowance or charge applies, e.g. The allowance/charge rate is 3 EUR per 10 tons.
RTE - M 1	- Rate details This segment is used to specify rate allowances/charges applicable for the entire product group.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the previous RTE segment.
SG26 - C 5	- TAX-MOA A group of segments of segments specifying tax related information for the allowance or charge.
TAX - M 1	- Duty/tax/fee details This segment is used to specify any taxes or duties which are due on the allowances or charges which have been specified for the entire product group.
MOA - C 1	- Monetary amount This segment is used to specify tax amounts for the previous TAX segment.
SG27 - C 20	- NAD-LOC-SG28-SG29 A group of segments identifying the parties with the associated information relevant for the pricing group.
NAD - M 1	- Name and address This segment group is used to specify names and addresses relevant to the current pricing or product grouping.
LOC - C 5	- Place/location identification This segment is used to specify the location details related to the identified party in the previous NAD.
SG28 - C 10	- RFF-DTM A group of segments giving references only relevant to the specified party.
RFF - M 1	- Reference This segment is used to indicate references related to the trading parties identified in the previous NAD segment.
DTM - C 5	- Date/time/period This segment is used to specify dates relating to the references given in the preceding RFF segment.
SG29 - C 5	- CTA-COM A group of segments giving contact details of the person or department within the party identified in the NAD segment.
CTA - M 1	- Contact information This segment is used to identify the department or person within the party identified specified in the previous NAD segment.
COM - C 5	- Communication contact This segment is used to identify the communications number and the type of communications used for the contact identified in the previous CTA segment.
SG30 - C 10	- PAT-PCD A group of segments specifying the terms of payment applicable for the whole pricing group.

4. Segments Description

PAT - M 1	- Payment terms basis This segment is used to provide payment terms information related to the entire product group.
PCD - C 1	- Percentage details This segment is used to specify percentages related to the previous PAT segment.
SG31 - C 10	- TDT A group of segments identifying the mode and means of transport, relating to the whole pricing group.
TDT - M 1	- Details of transport This segment is used to specify transport details which are applicable to the entire product group.
SG32 - C 5	- TOD-LOC A group of segments indicating the terms of delivery for the whole pricing group.
TOD - M 1	- Terms of delivery or transport This segment is used to specify the terms of delivery for the current product group.
LOC - C 2	- Place/location identification This segment is used to provide the location applicable to the current terms of delivery.
SG33 - C 10	- PAC-MEA A group of segments specifying the packaging, physical dimensions for goods referenced by the price group.
PAC - M 1	- Package This segment is used to provide packaging information for the entire product group.
MEA - C 10	- Measurements This segment is used to provide measurement information related to the packaging details for the entire product group.
SG34 - C 99	- EFI-CED-COM-RFF-DTM-QTY A group of segments that refers through an external file identification to each of the external engineering/CAD files and giving additional information about each of the files.
EFI - M 1	- External file link identification This segment is used to identify an external object by indicating its identification, the format, and its sequence number on the physical medium.
CED - C 99	- Computer environment details This segment is used to give details of the physical medium used to generate the external object.
COM - C 9	- Communication contact
RFF - C 9	- Reference This segment is used to identify any other EANCOM message to which the external object is linked.
DTM - C 9	- Date/time/period This segment is used to indicate the date/time on which the external object was generated.
QTY - C 9	- Quantity This segment is used to identify the size/volume of the external object identified in the EFI segment.
SG35 - C 9	- TRU-DTM Eine Segmentgruppe zur Identifikation technischer Regeln und ihrer Freigabedaten, die für die gesamte Produkt-/Preisgruppe zutreffen.

4. Segments Description

TRU - M 1	- Technical rules This segment is used to specify any technical rules which relate to the product group.
DTM - C 9	- Date/time/period This segment is used to specify the release date of the technical rules given in the previous TRU segment.
SG36 - C 999999	- LIN-PIA-IMD-MEA-QTY-HAN-ALI-DTM-RFF-LOC-FTX-SG37-SG38-SG40-SG41-SG47-SG48-SG51-SG52-SG54-SG55-SG56 A group of segments providing the relevant price/sales information for the specified product/service.
LIN - M 1	- Line item This segment is used to identify the GTIN of a product.
PIA - C 99	- Additional product id This segment is used to identify additional or substitutional item identification codes such as buyer's, or seller's item number.
IMD - C 999	- Item description This segment is used to describe the current line item.
MEA - C 10	- Measurements This segment is used to specify measurements related to the article identified in the LIN segment. Measurements related to the packaging of the article are provided in the MEA segment of the PAC segment group.
QTY - C 10	- Quantity This segment is used to provide quantity information for the current line item, e.g. minimum order quantity.
HAN - C 5	- Handling instructions This segment is used to specify any handling instructions for the current line item. Handling instructions related to the packaging of the product are provided in the HAN segment of the PAC segment group.
ALI - C 5	- Additional information This segment is used to indicate special conditions for the current line item, or, to specify the country of origin of the line item.
DTM - C 10	- Date/time/period This segment is used to specify relevant dates for the current line item.
RFF - C 99	- Reference This segment is used to identify references, which are related to the current line item.
LOC - C 1	- Place/location identification This segment is used to indicate the country, the continent or the region where the product may be sold. This segment should only be used to identify countries other than the 'country of origin', e.g. country of export. The country of origin should continue to be stated in the ALI segment of the message.
FTX - C 999	- Free text This segment is used to provide any free text information related to the current line item.
SG37 - C 999	- CCI-CAV-MEA A group of segments providing product characteristic and -product characteristic details.
CCI - M 1	- Characteristic/class id This segment is used to specify the characteristics of the current line item.

4. Segments Description

CAV - C 10	- Characteristic value This segment is used to further specify product characteristics for the current line item.
MEA - C 10	- Measurements This segment is used to specify any measurements related to the currently identified product characteristic class.
SG38 - C 10	- TAX-MOA A group of segments specifying a tax type, category and rate relating to the item.
TAX - M 1	- Duty/tax/fee details This segment is used to specify the tax details for the current line item.
MOA - C 1	- Monetary amount This segment is used to indicate any monetary amounts related to the previous TAX segment.
SG40 - C 100	- PRI-CUX-APR-RNG-DTM-LOC A group of segments identifying the details of the price information for the product or service identified in the LIN segment group.
PRI - M 1	- Price details This segment is used to provide price information for the current line item.
CUX - C 1	- Currencies This segment is used to provide currency information for the current line item.
APR - C 99	- Additional price information This segment is used to provide a reason for a change in the price specified in the PRI segment.
RNG - C 1	- Range details This segment is used to provide price range details for the current line item.
DTM - C 5	- Date/time/period This segment is used to identify specific dates and times associated with pricing information.
LOC - C 99	- Place/location identification This segment is used to indicate the party to which the price applies. The party is identified with an GS1 Global Location Number (GLN). In addition, related locations such as target market, actual point of delivery, ... can be specified.
SG41 - C 99	- ALC-ALI-DTM-SG42-SG43-SG44-SG45-SG46 A group of segments specifying allowances and charges for the price item line and has to be added to the allowances and charges at pricing group level and / or heading level, if any. When relevant, additional information, tax details may be indicated. The basis for the calculation of the allowance/charge may be a quantity, a percentage, an amount or a rate.
ALC - M 1	- Allowance or charge This segment is used to specify any allowances or charges which are applicable to the current line item.
ALI - C 5	- Additional information This segment is used to specify special conditions related to the allowance and/or charge in the ALC segment.
DTM - C 9	- Date/time/period This segment is used to indicate any dates related to the allowances/charges information specified in the ALC segment.

4. Segments Description

SG42 - C 10	- QTY-RNG A group of segments specifying the quantity of the allowance or charge with its measure unit specifier. A range to which the allowance or charge applies may be specified. e.g. An allowance of a free quantity of 20 pieces may be specified if the quantity of goods ordered is greater than 1000 pieces.
QTY - M 1	- Quantity This segment is used to specify quantity allowance/charge for the current line item.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the preceding QTY segment.
SG43 - C 99	- PCD-RNG A group of segments specifying the percentage for the allowance or charge, e.g. The allowance/charge amount is calculated as 5% of the goods value or a price reduction of 5% may be specified if the goods quantity ordered is within the range 5 tons to 10 tons.
PCD - M 1	- Percentage details This segment is used to specify percentage allowance/charges for the current line item.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the preceding PCD segment.
SG44 - C 10	- MOA-RNG A group of segments specifying a monetary amount for an allowance or charge. A range to which the allowance or charge applies can be specified, e.g. an allowance of 5000 EUR may be specified if goods value ordered is greater than 100000 EUR.
MOA - M 1	- Monetary amount This segment is used to specify monetary charges or discounts for the current line item.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the preceding MOA segment.
SG45 - C 10	- RTE-RNG A group of segments specifying the rate per unit and basis to which the allowance or charge applies, e.g. the allowance/charge rate is 3 EUR per 10 tons.
RTE - M 1	- Rate details This segment is used to specify rate charge/allowance information for the current line item.
RNG - C 1	- Range details This segment is used to specify ranges which apply to the preceding RTE segment.
SG46 - C 5	- TAX-MOA A group of segments of segments specifying tax related information for the allowance or charge.
TAX - M 1	- Duty/tax/fee details This segment is used to identify any taxes or duties which are due on the allowances or charges which have been specified for the current line item.
MOA - C 1	- Monetary amount This segment is used to specify in monetary terms the amount of tax due for the allowances and charges for the current line item.
SG47 - C 999	- PAC-MEA-HAN A group of segments identifying the packaging, physical dimensions, for the Price item line. If required, providing handling instructions and notification of hazardous materials.

4. Segments Description

PAC - M 1	- Package This segment is used to describe the packaging for the current line item.
MEA - C 10	- Measurements This segment provides measurement information related to the packaging of the current line item.
HAN - C 5	- Handling instructions This segment is used to specify the handling instructions related to the package identified in the PAC segment.
SG48 - C 10	- PAT-DTM-PCD-MOA A group of segments specifying the terms of payment applicable for the Price item line.
PAT - M 1	- Payment terms basis This segment is used by the supplier to specify any specific payment terms applicable the current product.
DTM - C 5	- Date/time/period This segment is used to specify any dates associated with the payment terms.
PCD - C 1	- Percentage details This segment is used to specify percentages related to the payment terms.
MOA - C 1	- Monetary amount This segment is used to specify monetary amounts related to the payment terms.
SG51 - C 99	- EFI-CED-COM-RFF-DTM-QTY A group of segments that refers through an external file identification to each of the external engineering/CAD files and giving additional information about each of the files.
EFI - M 1	- External file link identification This segment is used to identify an external object by indicating its identification, the format, and its sequence number on the physical medium.
CED - C 99	- Computer environment details This segment is used to give details of the physical medium used to generate the external object.
COM - C 9	- Communication contact
RFF - C 9	- Reference This segment is used to identify any other EANCOM message to which the external object is linked.
DTM - C 9	- Date/time/period This segment is used to indicate the date/time on which the external object was generated.
QTY - C 9	- Quantity This segment is used to identify the size/volume of the external object identified in the EFI segment.
SG52 - C 99	- NAD-SG53 A group of segments identifying a party with associated information for the current product.
NAD - M 1	- Name and address This segment is used to specify names and addresses relevant to the current product.

4. Segments Description

SG53 - C 99	- CTA-COM	A group of segments giving contact details of the person or department within the party identified in the NAD segment.
CTA - M 1	- Contact information	This segment is used to identify the department and person within the party identified in the previous NAD segment.
COM - C 99	- Communication contact	This segment is used to identify the communications number and the type of communications used for the contact identified in the previous CTA segment.
SG54 - C 9	- TRU-DTM	A group of segments to identify technical rules applicable for the actual product and the rules' issue dates.
TRU - M 1	- Technical rules	This segment is used to specify any technical rules which relate to the product group.
DTM - C 9	- Date/time/period	This segment is used to specify the release date of the technical rules given in the previous TRU segment.
SG55 - C 9	- DGS-QTY-FTX	A group of segments containing dangerous goods information relevant to the current product.
DGS - M 1	- Dangerous goods	This segment is used to indicate whether the current line item is dangerous or hazardous. The identification of any relevant regulations concerning dangerous goods is possible in this segment.
QTY - C 9	- Quantity	This segment is used to specify the quantities relevant to the dangerous goods information.
FTX - C 9	- Free text	This segment is used to specify any additional free text information required for the dangerous goods.
SG56 - C 999	- HYN-PIA-QTY-SG58	A group of segments to specify hierarchical connections from the given product to higher or lower levelled products.
HYN - M 1	- Hierarchy information	This segment is used to provide hierarchical product information related to the current line item.
PIA - C 99	- Additional product id	This segment is used to provide a promotional variant number which is part of the identification of a product.
QTY - C 9	- Quantity	This segment is used to specify quantity information related to the current hierarchical product.
SG58 - C 9	- CCI-CAV-MEA	A group of segments to identify characteristics depending on the product's use within the hierarchy specific to the identified party.
CCI - M 1	- Characteristic/class id	This segment is used to specify characteristics related to the currently identified hierarchy.

5. Segments Layout

This section describes each segment used in the EANCOM® Price/sales catalogue message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

Notes:

1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.

2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.

2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	R	Indicates that the entity is required and must be sent.
- ADVISED	A	Indicates that the entity is advised or recommended.
- DEPENDENT	D	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	O	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	N	Indicates that the entity is not used and should be omitted.

2.3 If a composite is flagged as **N, NOT USED**, all data elements within that composite will have blank status indicators assigned to them.

3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	*	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

Segment Notes: This segment is used to provide any free text information related to the complete Price/Sales Catalogue message. Use of this segment in free form is not recommended since it inhibits automatic processing of the Price/Sales Catalogue. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission overheads. Standard texts should be mutually defined among trading partners and can be used to cover legal and other requirements. Example: FTX+ZZZ+1+001::91' (e.g., standard text code 001 = Special prices effective first of month)

6341	Exchange rate currency market identifier	C an..3	N	
Segment Notes: This segment is used to specify the currencies in which the prices in the Price/Sales Catalogue are quoted and to specify the currencies for international trading. The CUX segment is mandatory for international exchanges. This segment is used to specify the currencies in which the prices in the Price/Sales Catalogue are quoted. When specifying Reference and Target Currencies, one occurrence of CUX is all that is required. The reference currency is identified in the first occurrence of the composite C504, with the target currency specified in the second occurrence of C504. The rate of exchange between the two is detailed in DE 5402. The general rule for calculating rate of exchange is as follows: Reference Currency multiplied by Rate = Target Currency. Example: 1. Where only the price list currency needs to be identified for national trade. CUX+2:EUR:8' CUX+2:EUR:8+3:USD:11+0.90243'

5388 Product group name	C an..35	O		
Segment Notes: This segment is used to group a set of related products together. The detail section of the Price/Sales Catalogue starts with the PGI segment. PGI is used to group products, by price, by product type, by buying group, and/or by supplier/manufacturer. In the case of product grouping then : DE 5379: Code value '10E' is use to identify a group of product which when put together forms a finished item, e.g. a plate can be sold individually but can be put together with knives, forks, cups, etc., to form a dinner service. DE 5389 and 5388: These data element are used to provide the identification of a product group. Identification numbers provided here may be allocated on a bi-lateral basis between trading partners. Products can also be grouped by supplier and/or manufacturer, identified in the NAD-CTA-COM segment group following the PGI segment. If no grouping is used then: DE 5379 in PGI has the value 2 = No price group used. Example: PGI+3+KS::9:DAIRY FOODS'

6341	Exchange rate currency market identifier	C an..3	N		
Segment Notes:					
This segment is used to specify currency information which applies to the entire group.					
The CUX segment is mandatory for international exchanges.					
When specifying Reference and Target Currencies, one occurrence of CUX is all that is required. The reference currency is identified in the first occurrence of the composite C504, with the target currency specified in the second occurrence of C504. The rate of exchange between the two is detailed in DE 5402.					
The general rule for calculating rate of exchange is as follows:					
Reference Currency multiplied by Rate = Target Currency.					
Example:					
Where only the price list currency needs to be identified for national trade.					
CUX+2:EUR:8'					
CUX+2:EUR:8+3:USD:11+0.90243'

Segment Notes:					
This segment is used to provide pricing information which is relevant to a complete product group.					
Example: PRI+AAA:14.58:CT:AAE'					
Dependency Notes:					
Data elements 5284 and 6411 are used when a product is a variable quantity product, e.g. price per 200 kilos, or when the unit of measure for purchasing, delivery, and invoicing are different for a product, e.g. sugar is not a variable quantity product but ordered and delivered in packs, and invoiced in kilos or tonnes.

6341 Exchange rate currency market identifier	C an..3	N		

Segment Notes:

This segment is used to provide currency information for the whole product group.

The CUX segment is mandatory for international exchanges.

When specifying Reference and Target Currencies, one occurrence of CUX is all that is required. The reference currency is identified in the first occurrence of the composite C504, with the target currency specified in the second occurrence of C504. The rate of exchange between the two is detailed in DE 5402.

The general rule for calculating rate of exchange is as follows:

Reference Currency multiplied by Rate = Target Currency.

Example:

Where only the price list currency needs to be identified for national trade.

CUX+2:EUR:8'

CUX+2:EUR:8+3:USD:11+0.90243'

SG27	- C	20 - NAD-LOC-SG28-SG29			
NAD	- M	1 - Name and address			
Function:					
A segment identifying names and addresses of the parties, in coded or clear form, and their functions. It is recommended that where possible only the coded form of the party ID should be specified. e.g. The sender and the receiver are known to each other, thus only the coded ID is required, but the other parties specified in the message may vary and would have to be clearly specified, preferably in structured format.

Segment Notes:

This segment is used to identify additional or substitutional item identification codes such as buyer's, or seller's item number.

Example:

PIA+1+AX87655:IV'

In this example the PIA segment is used to provide an additional identification to the number provided in the 'Product Identification' PIA segment. This GTIN 5410738251028 refers to the buyer's internal part number AX87655.

PIA+2+5412345111184:SRV'

In this example the 'Identification for Substitution' PIA segment is used to provide a GTIN identification for substitution. The product identified in the 'Product Identification' PIA segment by the GTIN 5410738251028 can be substituted by the product identified in the current PIA segment by the GTIN 5412345111184 in case the former is not available.

PIA+3+5412345111184:SRV'

In this example the 'Substituted By' PIA segment is used to identify a number which is replacing the current primary GTIN. The current number is identified in the 'Product Identification' PIA segment.

PIA+4+5410738251028:SRV'

In this example the 'Substituted For' PIA segment is used to provide the number of the product which is being substituted for the former primary GTIN. The new code 5412345111184 would be included in the message in the 'Product Identification' PIA segment.

PIA+5+51028:SA'

In this example the PIA segment is used to identify the non-GS1 primary product code.

PIA+X2+INTRLCDE:SA'

In this example the PIA segment is used to delete additional identification of a product, in this case the supplier code INTRLCDE.

PIA+X1+5412345111115:SRV'

This example details the situation where the buyer explicitly specifies that no other product is acceptable but the one specified in the LIN segment. The PIA re-specifies the product code from the LIN segment.

Segment Notes:

This segment is used to provide any free text information related to the current line item.

Use of this segment in free form is not recommended since it inhibits automatic processing of the Price/Sales Catalogue. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission overheads. Standard texts should be mutually defined among trading partners and can be used to cover legal and other requirements.

Example:

Dependency Notes:

Data elements 5284 and 6411 are used when a product is a variable quantity product, e.g. price per 200 kilos, or when the unit of measure for purchasing, delivery, and invoicing are different for a product, e.g. sugar is not a variable quantity product but ordered and delivered in packs, and invoiced in kilos or tonnes.

6341 Exchange rate currency market identifier	C an..3	N		

Segment Notes:

This segment is used to provide currency information for the current line item.
The CUX segment is mandatory for international exchanges.
When specifying Reference and Target Currencies, one occurrence of CUX is all that is required. The reference currency is identified in the first occurrence of the composite C504, with the target currency specified in the second occurrence of C504. The rate of exchange between the two is detailed in DE 5402.
The general rule for calculating rate of exchange is as follows:
Reference Currency multiplied by Rate = Target Currency.

Example:
Where only the price list currency needs to be identified for national trade.
CUX+2:EUR:8'
CUX+2:EUR:8+3:USD:11+0.90243'

Segment Notes:

This segment is used to specify any additional free text information required for the dangerous goods. Use of this segment in free form is not recommended since it may inhibit automatic processing of the Price/sales catalogue message. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission overheads. Standard texts should be mutually defined between trading partners and can be used to cover legal or other requirements.

Example 1 - Addition of New Lines

The following is an example of a Price/Sales Catalogue message providing the addition of a new despatch unit, traded unit, and consumer unit to a trading partner's file. The relationship or hierarchy between the different product levels is detailed through the use of sub-lines.

The supplier sending the message is identified by GLN 4012345500004 with a Tax Registered number of VR95745. The potential buyer is identified by GLN 5412345000020 with a Tax Registered number of VR12345. The trading terms are those agreed upon in the contract 5622ABE of the 10th August 2002.

The message, sent the 1st October 2002 has been given the reference number PC32458, provides the identification of three levels (of the hierarchy) a new product, Corn Crispies, as a despatch unit, a trade unit and a consumer unit. The relationship between the three levels is achieved through the use of the sub-line function in the LIN segment.

The price list currency is specified as Euros.

The first occurrence of LIN, with line number 1, is used to describe the consumer unit identified by the GTIN 5410738377131, being the code for a box of Healthiest Corn Crispies. It is further identified by the supplier's article number CU32555. The handling instructions indicate that the box contains foodstuffs. The suggested retail price of the product is 40 EUR and VAT is charged at 21 percent. No sub-lines are used since there is no reference to a smaller unit.

The second occurrence of LIN, with line number 2, is used to describe the trade unit identified by the GTIN 5410738377117, being the code for a case of Corn Crispies. It is further identified by the supplier's article number TU32555. The handling instructions indicate that the case contains foodstuffs. The country of origin of the product is Belgium and it is priced at 500 EUR per case with an 8 percent discount for orders over 48 cases. VAT is charged at 21 percent and the packaging of the product is described as a carton.

The third occurrence of LIN, with line number 3, is used to indicate that the consumer unit previously identified by the GTIN 5410738377131 is a sub-line of the trade unit identified by the GTIN 5410738377117. There are 48 consumer units contained in the traded unit.

The fourth occurrence of LIN, with line number 4, is used to describe the despatch unit identified by the GTIN 5410738251028, being the code for a pallet of Corn Crispies. The suppliers internal part number for the despatch unit is PN32555. The handling instructions for the despatch unit describe the pallet as containing foodstuffs which is susceptible to frost damage. The price for the despatch unit is 12000 EUR with an allowance of 10 percent if more than 50 pallets are ordered. VAT is charged at 21 percent.

The fifth occurrence of LIN, with line number 5, is used to indicate that the traded unit previously identified (LIN 2) by the GTIN 5410738377117 is a sub-line of the despatch unit identified by the GTIN 5410738251028. Each despatch unit contains 24 traded units.

Example 2 - Amendment of Traded Unit information

The following is an example of a Price/Sales Catalogue message providing the amendment of a products traded unit information.

The supplier sending the message is identified by GLN 4012345500004, and the Tax Registered number of VR95745. The potential buyer is identified by GLN 5412345000020, and the Tax Registered number of VR12345. The trading terms are those agreed upon in the contract 5622ABE of the 10th August 2002.

The message, sent the 1st November 2002 has been given the reference number PC32480, provides the code for the traded unit which is to be amended.

The price list currency is specified as Euros.

The LIN/PIA segments are used to identify the traded unit. The GTIN 5410738377117 is identified in the LIN segment. Only the information relevant to the change is included. The new case price is 480 EUR with a 12 percent discount for orders over 52 cases.

Example 3 - Deletion of the full Product Hierarchy

The following is an example of a Price/Sales Catalogue message requesting the deletion of a full product hierarchy, i.e., Despatch Unit, Traded Unit and Consumer Unit.

The supplier sending the message is identified by GLN 4012345500004, and the Tax Registered number of VR95745. The potential buyer is identified by GLN 5412345000020, and the Tax Registered number of VR12345. The trading terms are those agreed upon in the contract 5622ABE of the 10th August 2002.

The message, sent the 21st December 2002 has been given the reference number PC32888, provides codes for the despatch unit, the traded unit, and finally the consumer unit, all of which are to be deleted. At all three levels the Action Request Code is set to 2, Deletion. The deletion of any sub-levels in the product hierarchy must be handled by the message receiver, i.e. the message sender needs only to send the main line, the receiver must delete all related sub-lines.

Example 4 - Addition of a set or mixed pack

The following is an example of a Price/Sales Catalogue message providing the addition of a set or mixed pack consisting of two articles already known by the recipient of the information and one article new to the recipient.

The supplier sending the message is identified by GLN 4012345500004. The potential buyer is identified by GLN 5412345000020.

The message sent the first of January 2002 has been given the reference number PC12123, provides a description of the new product, First Aid set, consisting of three products in different quantities.

The price list currency is specified as Euros.

The first occurrence of the LIN segment is used to describe one component of the mixed pack that is new to the buyer. This article is identified by GTIN 8711113000000. The article is a consumer unit packed in a box. The suggested retail price of the product is 400 EUR and VAT is charged at 21 percent.

The second occurrence of the LIN segment is used to describe the mixed pack, identified with GTIN 5410738251028. The mixed pack is a consumer unit. The set is packed in a box which should be handled with care. The suggested retail price of the product is 900 EUR and VAT is charged at 21 percent.

The third, fourth and fifth occurrence of the LIN segments are used to refer to the articles inside the mixed pack. The articles are identified by the GTINs 8711112000001, 8711111000002 and 8711113000000. The quantity of each article inside the mixed pack is given.

Because two of the articles inside the mixed pack are already known by the buyer no further description of these articles is required.
