Status

MESSAGE TYPE : IFTMIN
REFERENCE DIRECTORY : D.01B
EANCOM® SUBSET VERSION : 004

Definition

A message from the party issuing an instruction regarding forwarding/transport services for a consignment under conditions agreed, to the party arranging the forwarding and/or transport services.

Principles

This message should not be used to instruct the despatch of products. The 'Instruction To Despatch (INSDDES)' message should be used for this purpose.

The instruction results in a transport contract for one consignment and is primarily meant for administrative purposes. It will be the message from shipper to carrier or forwarder containing the final details of the consignment for which services are provided. The instruction message is the one and only message which results in the actual contract which can either be a document or an electronic contract.

If only one message will suffice in an exchange between a shipper and a carrier/forwarder to convey the information related to one consignment then the instruction message should be the one as this message is the only message for a single consignment message that results in a contract.

In addition to the main principles detailed above, a number of general principles also apply;

- A consignment may contain several goods items.
- A consignment is identified by a consignor's reference number (code CU) in the RFF segment.
- Goods items may or may not be containerised.
- Goods items may be transported in one or more containers, and a single container may contain one or more goods items.
- One goods item may be related to one or more customs tariff codes.
- Goods items related to one customs tariff code may be carried in one or more containers.
- Goods items may reflect either the contractual or operational description of the goods.
- The instruction always relates to one consignee but may be for several different delivery locations.
- One transport instruction message should always equal one consignment.
- Pre-carriage (advanced haulage) and/or on-carriage (destination haulage) of goods items or equipment within one booking or instruction may take place in different steps, each step specified with its own transport details group.
- Transport devices, which have the ability of powered movement on their own, are specified in the transport details group. Other load or transport devices are specified as equipment.
- Packaging for goods items can be expressed at up to three levels.
- A goods item consists of one or more despatch units that adhere to the same package type and goods description.
- A despatch unit is the unit of cargo that will be handled and to which an SSCC can be affixed.

1. Introduction

A number of generic transport terms are used in this specification, to be described as:

CONSIGNEE

the organisation (party) which has the intention to receive the goods.

CONSIGNOR

the party ordering transport, orders a carrier to collect goods for transportation.

CONSIGNMENT

a collection of goods items to be transported from one or many despatch locations to one or many delivery locations. (synonym: shipment).

CARRIER

the party contracted by the consignor or forwarder to transport goods.

DESPATCH LOCATION

the physical location from which goods for transport are shipped.

DELIVERY LOCATION

the physical location to which goods for transport are finally delivered.

EQUIPMENT

material resources necessary to facilitate the transport and handling of cargo. Transport equipment does under the given circumstances not have the ability to move by its own propulsion (e.g. sea container, trailer, unit load device, pallet).

FORWARDER

the party contracted by the consignor to arrange to have the goods transported.

GOODS ITEM

a collection of products normally grouped together for transport purposes, e.g. 12 pallets of foodstuffs.

LINE ITEM

a specific product identified and defined for trade purposes, e.g. a case of flour containing 24 packets of 250 grams.

MODE OF TRANSPORT

the method of transport used for the conveyance of goods or persons, e.g. by rail, by road, by sea.

MEANS OF TRANSPORT

the vehicle used for the transport of goods or persons, e.g. aircraft, truck, vessel.

PLACE OF ACCEPTANCE

the place at which the responsibility of the carrier starts.

PLACE OF DELIVERY

the place at which the responsibility of the carrier ends.

TYPE OF MEANS OF TRANSPORT

the type of vehicle used in the transport process, e.g. wide body, tank truck, passenger vessel.

TYPE OF EQUIPMENT

the type of material used, e.g. 40 feet container, four way pallet, mafi trailer.

4. Segments Description

Transport Instruction Heading Section

UNH - M 1	- Message header This segment is used to head, identify and specify a message.
BGM - M 1	- Beginning of message This segment is used to indicate the type and function of a message and to transmit the identifying number.
DTM - C 9	- Date/time/period This segment is used to specify the date of the Transport Instruction message.
TSR - C 9	- Transport service requirements This segment is used to indicate any special contracts, services, priorities or nature of cargo in relation to the transport.
MOA - C 99	- Monetary amount This segment is used to specify insurance, customs or other values for the complete transport instruction message.
FTX - C 99	- Free text This segment is used to provide free form or coded text information related to the entire message.
CNT - C 9	- Control total This segment is used to provide message control information such as the total weight of the consignment, or, the total number of items in the consignment.
SG2 - C 2	- TOD-LOC A group of segments to specify terms of delivery and related locations.
TOD - M 1	- Terms of delivery or transport This segment is used to specify the terms of delivery for the transport instruction.
LOC - C 9	- Place/location identification This segment is used to indicate the location to which the terms of delivery are applicable.
SG3 - C 999	- RFF-DTM A group of segments containing a reference and constants which apply to the entire message.
RFF - M 1	- Reference This segment is used to specify references related to the complete transport instruction message.
DTM - C 9	- Date/time/period This segment is used to specify any dates related to the previous RFF segment.
SG4 - C 9	- GOR-DTM-LOC-SEL-FTX-SG5 A group of segments to identify customs and other governmental procedures and required documents.
GOR - M 1	- Governmental requirements This segment is used to indicate any applicable governmental procedures and required action related to the import, export or transit of the entire consignment, e.g. arrangements to be made for the inspection of the goods by customs at the time of export.
DTM - C 9	- Date/time/period This segment is used to specify any dates or periods related to governmental procedures and/or documents for the entire consignment, e.g. the expiration date of the customs documents.

4. Segments Description

LOC - C 9	- Place/location identification This segment is used to identify any locations related to the governmental procedures for the entire consignment, e.g. the customs office at which the consignment leaves the country.
SEL - C 9	- Seal number This segment is used to specify a seal number and the sealing party, for the entire consignment, e.g. the carrier being responsible for sealing the truck.
FTX - C 9	- Free text This segment is used to specify additional information.
SG5 - C 9	- DOC-DTM A group of segments to specify required documents by government.
DOC - M 1	- Document/message details This segment is used to identify any documentation related to the entire consignment which is required by government, e.g. despatch note model T2 that ascertains that all goods of the consignment were originally produced in a country of the European Community.
DTM - C 1	- Date/time/period This segment is used to specify any dates related to the previous DOC segment, e.g. date of the despatch note model T2.
SG8 - C 99	- TDT-DTM-SG9-SG10 A group of segments to indicate details of the movement of goods such as mode and means of transport, locations, departure, and arrival date(s) and time(s).
TDT - M 1	- Details of transport This segment is used to indicate the transport means, and where necessary, the carrier to be used for the consignment for which a transport instruction is being issued. When used, it is mandatory to indicate the main carriage transport mode in this segment.
DTM - C 9	- Date/time/period This segment is used to specify dates relating to the transport means.
SG9 - C 99	- LOC-DTM A group of segments to specify a location and date/time related to this leg of transport.
LOC - M 1	- Place/location identification This segment is used to identify locations relating to the transport details for the complete transport instruction.
DTM - C 9	- Date/time/period This segment is used to specify any dates related to the location identified for a specific stage of transport.
SG10 - C 9	- RFF-DTM A group of segments to specify an additional reference related to the stage of the transport.
RFF - M 1	- Reference This segment is used to specify references related to the transport details for the complete transport instruction.
DTM - C 1	- Date/time/period This segment is used to specify any dates related to the previous RFF segment.
SG11 - M 99	- NAD-LOC-MOA-SG12-SG13-SG15 A group of segments to identify a party, related references, locations contacts and required documents.

4. Segments Description

NAD - M 1	- Name and address This segment is used to identify the trading partners involved in the Transport Instruction message. Identification of the Consignor and Carrier or Forwarder is mandatory in the Transport Instruction message. If required, a Consignee may also be identified using NAD at this level in the message.
LOC - C 9	- Place/location identification This segment is used to identify locations related to the party specified in the NAD segment.
MOA - C 9	- Monetary amount This segment is used to indicate monetary amounts for the party receiving the goods.
SG12 - C 9	- CTA-COM A group of segments identifying a contact and its communications related to the party.
CTA - M 1	- Contact information This segment is used to identify department and contact names within the party specified in the NAD segment.
COM - C 9	- Communication contact This segment identifies the communications number and type of communications for the person or department identified in the previous CTA segment.
SG13 - C 9	- DOC-DTM A group of segments to identify required documents.
DOC - M 1	- Document/message details This segment is used to identify any documentation related to the party identified in the NAD segment which must accompany the consignment.
DTM - C 1	- Date/time/period This segment is used to specify any dates related to the previous DOC segment.
SG15 - C 9	- RFF-DTM A group of segments to specify a reference related to the party.
RFF - M 1	- Reference This segment is used to provide references related to the party identified in the NAD segment.
DTM - C 9	- Date/time/period This segment is used to specify dates relating to the references given in the previous RFF segment.

Transport Instruction Detail Section

SG18 - C 999	- GID-HAN-TMP-RNG-LOC-MOA-PIA-FTX-SG19-GDS-SG20-SG21-SG22-SG23-SG24-SG29-SG32 A group of segments to describe the goods items for which transport is undertaken.
GID - M 1	- Goods item details This segment is the trigger segment for the detail section of the transport instruction message. It is used to specify the number and type of packaging for the goods item.
HAN - C 99	- Handling instructions This segment is used to provide handling instructions relevant to the transport line item identified in the GID segment.
TMP - C 1	- Temperature This segment is used to specify a temperature setting related to the current goods item.

4. Segments Description

RNG - C 1	- Range details This segment is used to specify a temperature range related to the current goods item.
LOC - C 9	- Place/location identification This segment is used to indicate locations relevant to the current goods item line.
MOA - C 9	- Monetary amount This segment is used to specify the value of the goods item for customs, insurance or other valuation purposes.
PIA - C 9	- Additional product id This segment is used to specify identification codes relating to the goods item for which a transport instruction is being issued.
FTX - C 99	- Free text This segment is used to provide free form or coded text information related to the goods item.
SG19 - C 9	- NAD-DTM A group of segments to identify different places of collection and/or delivery for the goods item.
NAD - M 1	- Name and address This segment is used to identify parties related to the despatch and delivery of the current goods item. Information provided here will override similar information provided at the heading level (group 11) when the same qualifier is used.
DTM - C 1	- Date/time/period This segment is used to specify dates and times relating to the despatch or delivery parties specified in the previous NAD segment.
GDS - C 9	- Nature of cargo This segment is used to specify the exact nature of the goods.
SG20 - C 99	- MEA-EQN A group of segments to specify measurements applicable to a goods item.
MEA - M 1	- Measurements This segment is used to specify a measurement for the goods identified in the GID segment. All measurements given in the MEA segments relate to the highest level of packaging (the despatch units) identified in the GID segment.
EQN - C 1	- Number of units This segment is used to specify the number of packages (despatch units) within the goods item to which the measurement applies.
SG21 - C 99	- DIM-EQN A group of segments to specify dimensions applicable to a goods item.
DIM - M 1	- Dimensions This segment is used to indicate the dimensions of the goods item identified in the GID segment. All dimensions given in the DIM segments relate to the highest level packaging (the despatch units) identified in the GID segment.
EQN - C 1	- Number of units This segment is used to specify the number of packages (despatch units) within the goods items to which the dimensions apply.
SG22 - C 9	- RFF-DTM A group of segments to identify references to a goods item.
RFF - M 1	- Reference This segment is used to specify references which are applicable to the current goods item only.

4. Segments Description

DTM - C 9	- Date/time/period This segment is used to indicate dates relevant to the references specified in the previous RFF segment.
SG23 - C 999	- PCI-GIN A group of segments to specify marks and numbers of a goods item.
PCI - M 1	- Package identification This segment is used to specify markings and labels which have been marked on the packaging of the current goods item.
GIN - C 10	- Goods identity number This segment is used to provide the Serial Shipping Container Code marked on the packaging of the current goods item.
SG24 - C 9	- DOC-DTM A group of segments to specify documents and associated date(s) and time(s) for a goods item.
DOC - M 1	- Document/message details This segment is used to specify documents which are required for the current transport goods item only and which must accompany the consignment.
DTM - C 9	- Date/time/period This segment is used to specify dates relating to the documents identified in the previous DOC segment.
SG29 - C 999	- SGP A group of segments to specify the distribution of a goods item among the transport equipment.
SGP - M 1	- Split goods placement This segment is used to specify the placement of the goods item in equipment used to transport the consignment.
SG32 - C 99	- DGS-FTX-SG33-SG34 A group of segments to specify dangerous goods details related to the goods item. One goods item may be in different dangerous goods classes.
DGS - M 1	- Dangerous goods This segment is used to indicate whether the goods item contains any dangerous goods.
FTX - C 99	- Free text This segment is used to specify any additional information required for the dangerous goods.
SG33 - C 9	- CTA-COM A group of segments to identify a contact to whom communication regarding the dangerous goods can be directed.
CTA - M 1	- Contact information This segment is used to specify a contact name relating to the dangerous goods identified in the DGS segment.
COM - C 9	- Communication contact This segment identifies the communications number and type of communications for the person or department identified in the previous CTA segment.
SG34 - C 9	- MEA-EQN A group of segments to identify dangerous goods measurements.
MEA - M 1	- Measurements This segment is used to indicate a measurement of the dangerous goods in the goods line item.

4. Segments Description

EQN - C 1	- Number of units This segment is used to indicate the number of units to which the dangerous goods measurements apply.
SG37 - C 999	- EQD-EQN-MEA-DIM-SEL-SG39 A group of segments to specify equipment in which goods are transported.
EQD - M 1	- Equipment details This segment is used to indicate the units of equipment which will be used to transport the goods items.
EQN - C 1	- Number of units This segment is used to specify the number of pieces of equipment required.
MEA - C 9	- Measurements This segment is used to specify the physical dimensions including tolerances of the equipment identified in the preceding EQD segment.
DIM - C 9	- Dimensions This segment is used to indicate the dimensions of the equipment identified in the EQD segment.
SEL - C 99	- Seal number This segment is used to specify a seal number for the equipment identified in the EQD segment.
SG39 - C 9	- NAD-DTM A group of segments to identify different equipment pick-up or drop-off places.
NAD - M 1	- Name and address This segment is used to specify pick up or drop off parties for the equipment specified in the EQD segment.
DTM - C 1	- Date/time/period This segment is used to provide dates related to the equipment specified in the EQD segment.

Transport Instruction Summary Section

UNT - M 1	- Message trailer This segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.

5. Segments Layout

This section describes each segment used in the EANCOM® Transport instruction message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

Notes:

1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.
- 2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	R	Indicates that the entity is required and must be sent.
- ADVISED	A	Indicates that the entity is advised or recommended.
- DEPENDENT	D	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	O	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	N	Indicates that the entity is not used and should be omitted.

- 2.3 If a composite is flagged as **N, NOT USED**, all data elements within that composite will have blank status indicators assigned to them.
3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	*	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

6345 Currency identification code	C an..3	O		
6343 Currency type code qualifier	C an..3	N		
4405 Status description code	C an..3	N		
Segment Notes: This segment is used to specify insurance, customs or other values for the complete transport instruction message. Example: MOA+157:62112'				

5. Segments Layout

Segment number: 6

FTX - C 99 - Free text				
Function: A segment to specify free form or processable supplementary information, such as status of transport, remarks to be printed on the transport documents (where required), consignment remarks, insurance instructions, etc., or any other additional information.				
	EDIFACT	GS1	*	Description
4451 Text subject code qualifier	M an..3	M		AAI = General information BLR = Transport document remarks DEL = Delivery information HAN = Handling instructions PRD = Product information SIN = Special instructions ZZZ = Mutually defined
4453 Free text function code	C an..3	O		1 = Text for subsequent use

4447 Free text format code	C an..3	N		
Segment Notes: This segment is used to provide free form or coded text information related to the entire message. Use of this segment in free form is not recommended since it may inhibit automatic processing of the Transport Instruction. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission overheads. Standard texts should be mutually defined between trading partners and can be used to cover legal or other requirements. Example: FTX+DEL+1+002::91' (Supplier assigned Code value 002 = Please ensure complete delivery on requested date.)

5. Segments Layout

Segment number: 10

SG3		- C	999 - RFF-DTM		
RFF		- M	1 - Reference		
Function:					
A segment to express a reference which applies to the entire message such as: the document/message number that is to be updated by this very message (according to data element 1225 Message function code in segment BGM), booking reference, order number, insurance contract, etc.					
		EDIFACT	GS1	*	Description
C506	REFERENCE	M	M		
1153	Reference code qualifier	M an..3	M		AWB = Air waybill number BN = Booking reference number CT = Contract number CU = Consignor's reference number HWB = House waybill number LC = Letter of credit number MWB = Master air waybill number TRI = Transport instruction number (GS1 Temporary Code) Code value 'TRI' is only used when codes values 1 (Cancellation) or 5 (Replacement) are used in data element 1225 of the BGM segment. The code value 'CU' is the common reference number for the consignment which is used in all transport messages (IFTMBF, IFTMIN, IFTMAN, etc).
1154	Reference identifier	C an..70	R		
1156	Document line identifier	C an..6	N		
4000	Reference version identifier	C an..35	N		
1060	Revision identifier	C an..6	N		
Segment Notes:					
This segment is used to specify references related to the complete transport instruction message.					
Example:					
RFF+CT:76214'					

5. Segments Layout

Segment number: 11

SG3		- C	999 - RFF-DTM

3055	Code list responsible agency code	C an..3			
3232	Second related location name	C an..70			
5479	Relation code	C an..3	N		
Segment Notes: This segment is used to identify any locations related to the governmental procedures for the entire consignment, e.g. the customs office at which the consignment leaves the country. Example: LOC+42+BE-BRU'					

5. Segments Layout

Segment number: 15

SG4		- C	9 - GOR-DTM-LOC-SEL-FTX-SG5		
SEL		- C	9 - Seal number		
Function:					
A segment to identify seals and seal issuer associated with the Customs procedure and/or Customs document for the consignment.					
		EDIFACT	GS1	*	Description
9308	Seal identifier	C an..35	R		
C215	SEAL ISSUER	C	R		
9303	Sealing party name code	C an..3	R		CA = Carrier CU = Customs SH = Shipper TO = Terminal operator

C208	IDENTITY NUMBER RANGE	C	N		
7402	Object identifier	M an..35			
7402	Object identifier	C an..35			
Segment Notes:					
This segment is used to specify a seal number and the sealing party, for the entire consignment, e.g. the carrier being responsible for sealing the truck.					
Example:					
SEL+4282+CA:::EUROLOG'					
Dependency Notes:					
The use of the SEL segment in the segment group 37 is recommended. Only if customs seals are involved in particular transport environments such as bonded goods the SEL segment in the segment group 4 should be used.					

5. Segments Layout

Segment Notes:

This segment is used to specify identification codes relating to the goods item for which a transport instruction is being issued.

Code values provided in this segment are provided for information purposes and not for the identification of the goods to be consigned. The identification of the goods to be consigned is carried out in the GID segment.

4447	Free text format code	C an..3	N		
Segment Notes: This segment is used to provide free form or coded text information related to the goods item. Use of this segment in free form is not recommended since it may inhibit automatic processing of the Transport Instruction. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission overheads. Standard texts should be mutually defined between trading partners and can be used to cover legal or other requirements. Note 1: All free text descriptive data for the goods item must be placed in this segment using code value 'AAA' in data element 4451. Example: FTX+AAA+++CONSUMER ELECTRONICS'

SG20	- C	99 - MEA-EQN			
MEA	- M	1 - Measurements			
Function:					
A segment to specify measurements, other than dimensions, applicable to a goods item.					
		EDIFACT	GS1	*	Description
6311	Measurement purpose code qualifier	M an..3	M		AAE = Measurement CHW = Chargeable weight LMT = Loading metre
C502	MEASUREMENT DETAILS	C	A

When Unit Gross Weight is provided in this segment the measurement provided relates to the total gross weight of one single despatch unit in the goods item. The number of despatch units of the goods item that all have the same quoted gross weight is specified in the EQN segment when different from the number of despatch units specified in the GID segment. When Gross Weight is provided the measurement relates to the total gross weight of a number of despatch units in the goods item. The number of despatch units of the goods item that together have the quoted gross weight is specified in the EQN segment when different from the number of despatch units specified in the GID segment.

6. Examples

The following is an example of a transport instruction messages from a consignor identified by GLN 5412345123453 to a carrier identified with GLN 5411234512309. The consignee (party to receive the goods) is identified with GLN 5411234444402.

The transport instruction is allocated the number 569952 and is dated the 1st of March 2002 . The consignor is requesting the transportation of one returnable pallet by road which contains 14 packages which have a consignor issued reference number of TI1284. The place of departure is identified by GLN 5412345678908. The transport line item, which must be transported within a temperature range of -5 to plus 5 degrees Celsius, has a declared value of the transport line item is 45000 Euros.

GTIN for the packages being transported is identified as 5410738377117 and the serial shipping container code for the pallet containing the packages is identified using the EAN.UCC serial shipping container code 354123450000000014. The delivery party is identified with GLN 5412345145660.
